Asher Blue J. Basco

Product Designer | UI/UX | Full-Stack Developer | Remote (US/EU)

San Fernando, Pampanga, Philippines | bascoasherblue@gmail.com | linkedin.com/in/asher-blue-basco-76751644a | github.com/blublu24 | blublu24.github.io/Portfolio

Summary

Developer-turned-product designer who bridges the gap between Figma designs and production code. Owns design end-to-end, from user research and information architecture through high-fidelity prototyping to live Flutter and React implementation, which shortens the design-to-development handoff. Combines a full-stack engineer's understanding of feasibility with a self-taught designer's eye for usability and accessibility. Designed ~60 screens across 4 projects, with products serving 25+ users. Seeking a Product Designer role on a US/EU remote team.

Experience

Full-Stack Developer & UI/UX Designer

Wing An Marketing | July 2026 to Present | *5-developer team*

Xpro Delivery: Transportation Management System Redesign

- Delivered a cleaner experience for 13+ beta users, who reported that key information now appears on scroll with fewer clicks, and welcomed the redesign.
- Redesigned the full legacy app in Figma, restructuring information architecture, simplifying navigation, clarifying button and icon labels, and refreshing color, typography, and layout.
- Removed redundant information and unlabeled icons that had made the original navigation confusing and frustrating.
- Built part of the Flutter app, which runs on a Laravel/PHP and MySQL backend.
- Conducted regular direct interviews with end users, informing design decisions as both developer and designer.

WMS Tactical: Warehouse Management System

- Translated a legacy Basic4Android (B4A) system into modern Figma specs ahead of a full Flutter migration, on a project larger than Xpro.
- Solved the core design challenge of fitting all required buttons, cards, and data fields onto warehouse-staff screens without cramming, using deliberate layout and information hierarchy.
- Designed a subset of the application's screens and helped build them in Flutter within a multi-developer team.

Program Management System

- Designed and built an internal workflow management application.

Projects

Sagana (formerly OnlyFarms): AgTech Mobile E-Commerce App

University thesis | 2025 to 2026 | *Lead UI/UX Designer, team of 3*

- Won the regional stage of the Department of Agriculture's nationwide Youth Farmers Challenge; currently competing for a national spot.

- Earned the Department of Agriculture's invitation to compete after thesis user-interview findings were picked up by the regional office.
- Identified a real market problem through interviews with farmers and buyers: middlemen hoarded stock and resold at inflated prices, leaving Philippine farmers with thin margins.
- Designed a mobile e-commerce app that connects farmers directly with household buyers at farmer-set prices, giving buyers fresh produce at lower cost.
- Led the full design process end-to-end: user flows, wireframes, high-fidelity screens, and an interactive prototype for four roles (buyer, farmer, rider, admin).
- Coded part of the React Native front end and some of the Laravel backend.

Freelance / Client Work

Product Designer, SukiTuki (Wet-Market E-Commerce App for Seniors)

Paid contract | 1 week | 2025

- Delivered 15 to 20 high-fidelity interactive screens and a clickable Figma prototype in one week for an e-commerce app serving wet-market buyers in the Philippines.
- Supported the client's capstone project, which passed with the prototype in active use.
- Built accessibility-first for an older user base, with a larger-text option, uncrowded screens that avoid small type, and a Tagalog-translated interface.
- Applied familiar e-commerce mental models so the layout felt intuitive to non-technical users.
- Used AI to generate screen skeletons and placeholders, then designed each screen deliberately by hand.

Skills

Design: Figma (components, auto-layout, variants, prototyping, Figma Animate), wireframing, high-fidelity UI design, interactive prototyping, interaction design, information architecture, user flows, accessibility-first design, design systems fundamentals

Research: User interviews, problem discovery, usability feedback synthesis

Development: HTML/CSS, React, React Native, Flutter, Laravel/PHP, MySQL, full-stack development, design-to-code implementation

Workflow: AI-assisted wireframing and scaffolding, end-to-end design ownership, direct designer-developer handoff

Education

BS Information Technology Pampanga State University | Graduating 2026

Design skills are self-taught, including Figma and design theory.

Awards

- **Regional Winner**, Department of Agriculture Youth Farmers Challenge (YFC), a nationwide competition, for Sagana (formerly OnlyFarms); currently competing for a national spot
